THORTION. THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC
IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES
VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND
CONCENTRATION OF THESE 2 GROWTH FACTORS.
SUBUNIT: MONOMER.
MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN
                                                                                                                                                   ۳

              MOSCATELLIA D., JOSEPH-Silverstein J., Manejias R., Rifkin D.B.;
RT "Mr 25,000 heparin-binding protein from guinea pig brain is a high
RT molecular weight form of basic fibroblast growth factor.";
RL Proc. Nacl. Acad. Sci. U.S.A. 84:5778-5782(1987).
CC -!- FUNCTION: WIDE-SPECTRUM MITOGENIC, ANGIOGENIC, AND NEUROTROPHIC
CC FACTOR. INFLICATED IN A MULTITUDE OF PHYSIOLOGIC AND PATHOLOGIC
CC PROCESSES, INCLUDING LIMB DEVELOPMENT, ANGIOGENESIS, WOUND
CC PROLIFERATION, AND TUMOR GROWTH. POTENT MITOGEN AND CHEMOATTRACTANT FOR
MESENCHYME-DERIVED CELLS. IMPLICATED IN THE DIFFERENTIATION,
CC PROLIFERATION, AND MAINTENANCE OF CELLS IN THE CENTRAL NERVOUS
CC SYSTEM AND IN BOME FORMATION. MAJOR ANGIOGENIC FACTOR THAT ALSO
CC SYSTEM AND EN BOME FORMATION. MAJOR ANGIOGENIC FACTOR THAT ALSO
CC SUBUNIT: FORMS A QUATERNARY COMPLEX WITH TWO FGFRI AND AT LEAST
CNE HEPARAN SULFATE (BY SINILARITY).
C1- SUBUNIT: SOLONGS AT LEAST TWO ISOFORMS; 18 KDA AND 25 KDA
CSHOWN HERE); MAY BE PRODUCED BY USE OF ALTERNATIVE TRANSLATION
C1- SIMILARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
C1- SIMILARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
C1- CONTION: THIS IS A CONCEPTUAL TRANSLATION, MANY BETTY BETTY
C1- SIMILARITY TO THE HUWAN SEQUENCE AS WELL AS ON THE BASIS OF PARTIAL AMINO-ACID SEQUENCE AS WELL AS ON THE BASIS OF PARTIAL AMINO-ACID SEQUENCE AS WELL AS ON THE BASIS OF

"The role brof in canine Hemangiosarcoma,";

Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.

FACTOR. IMPLICATED IN A MULTITUDE OF PHYSTOLOGIC AND NEUROTROPHIC FACTOR. IMPLICATED IN A MULTITUDE OF PHYSTOLOGIC AND PATHOLOGIC PHOCESSES; INCLUDING LIMB DEVELOPMENT, ANGIOGENESIS, WOUND HEALING, AND TUMOR GROWTH. POTENT MITOGEN AND CHEMOATTRACTANT FOR MESENCHYME-DERIVED CELLS. IMPLICATED IN THE DIFERENTIATION, MESENCHYME-DERIVED CELLS. IMPLICATED IN THE CENTRAL NERVOUS SYSTEM AND IN BONE FORMATION. MAJOR ANGIOGENIC FACTOR THAT ALSO ACTIVATES TUMOR NEOVASCULARIZATION (BY SIMILARITY).

ACTIVATES TUMOR NEOVASCULARIZATION (BY SIMILARITY).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                            Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seq length: 0

One or more positively-charged AAs in the heparinbinding domain (AAs 128-138) are replaced by neutral or negatively-charged residues as indicated in the feature table. A recombinant vector (pUC9-TSF11 or pUC9delH3-pTSF-3) contg. the mutated DNA can be used to transform bacterial or mammalian host cells for prodn. of the analogue. See also AAP94038.

The peptide sequence was deduced from the synthetic DNA sequence prepd. as described in EP-363675. E. coll cells transformed with the synthetic DNA were lysed and the supernatent purified, giving a 50:50 mixture of a 154 residue bFGF (2-155) having the amino acid sequence of the 155 residue form (Abraham et al., Science, 233, 545-548, 1986) shown here but without the N-terminal Met, and a 153 residue bFGF (3-155). An adduct of bFGF formed with heparin or
